Dear Hiring Manager,

I am writing to express my interest in an Instructional Designer position. I am currently completing my Master of Science in Instructional Technology at the University of North Texas, graduating in May 2026, and I bring a unique combination of technical development experience and learning design expertise.

My background in computer science, along with a frontend development role at Think Flow Software, has shaped my ability to build structured, user-centered solutions. Transitioning into instructional technology allowed me to apply these same principles—clarity, efficiency, and usability—to designing effective learning experiences.

During my graduate program, I have designed and developed end-to-end eLearning solutions using models such as ADDIE and SAM. For example, I created a Workplace Safety eLearning course that addressed performance gaps through scenario-based learning, interactive assessments, and SCORM/xAPI integration. I have also developed learning materials using Articulate Storyline 360 and Rise, incorporating branching logic and adaptive elements to enhance learner engagement.

In my role as a Teaching Assistant at the Intensive English Language Institute at UNT, I collaborated with faculty to design instructional materials for diverse learners. This experience strengthened my ability to translate complex subject matter into accessible, learner-centered content while iterating based on feedback.

Additionally, my exposure to emerging technologies, including completing NVIDIA's Deep Learning Institute workshop on AI agents, allows me to approach instructional design with a forward-looking perspective—especially in areas like adaptive learning and data-informed training.

I am particularly interested in opportunities where I can contribute to developing technical training, collaborate with cross-functional teams, and design scalable learning solutions that create measurable impact.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my skills and background align with your team's needs.

Sincerely,

Multazim Hussain Mohammad
